Project Name	AUTOMATING EMPLOYEE DATA
Maximum Marks	4 Marks

Solution Architecture

- **Overview**

Solution Architecture explains how the system solves the problem using technology.

"The Automating Employee Data system uses a web-based architecture where users interact through a frontend interface, data is processed in the backend, and stored securely in a database."

- **Architecture Type**

3-Tier Architecture

1. **Presentation Layer (Frontend)**
2. **Application Layer (Backend)**
3. **Data Layer (Database)**
